Offer & Request

CLASSE + Energy Labelling Partnership

CLASSE + is an instrument to facilitate the consumer's choice of more efficient products in the rehabilitation of buildings or their common parts. In particular, an energy label is used to "translate" technical information about windows, insulation, paints, etc. on a scale similar to that used in home appliances, which consumers understand more easily. Currently CLASSE+ labels are available for windows (as a voluntary scheme) and will soon be available for paints as well.

To stimulate demand for CLASSE+ energy labels, a Partner's Network was created, which aims to recognize and value entities that are concerned with energy efficiency in their activities. CLASSE+ partners commit to promote actions related to the use and promotion of the energy label as an instrument for more efficient choices.

Among the advantages of being a member of the CLASSE+ Partner's Network, we can highlight:

- ▣ Use of the "CLASSE+" brand and its signature "efficiency has class", as a distinctive element and proof of its commitment in the promotion of energy efficiency and sustainability;
- ▣ Opportunity to publicize, in the regular communication activities of ADENE, the actions carried out by the entity as examples of good practice in energy efficiency;
- ▣ Availability of ADENE for technical support in the identification and implementation of actions to promote energy efficiency;

▯ **Discounts in specific training actions promoted by ADENE Academy.**
